Oxbo 9200 Coffee Harvester

For over 15 years coffee growers around the world have turned to the reliable performance of the Model 9200 to deliver quality coffee while reducing labor costs. With a stable 3-wheel design, the harvester is maneuverable and features durable polycarbonate catcher plates with adjustable pitch for maximum fruit retention. The Oxbo 9200 is capable of effectively and efficiently harvesting cherries from large or small plants and is a cost effective way of picking coffee.

### Features

**Large Picking Tunnel:** The large picking tunnel of the Model 9200 accepts bigger trees at higher picking speeds with minimal damage and bean droppage. Available with either the selective pick Dynarotor™ head or the aggressive Dynarotor-Plus™ picking head, the Oxbo 9200 effectively and efficiently removes cherries. The horizontal shaking action and free turning picking drums virtually eliminate drag and tree damage.

**Picking Heads:** With options of either a high capacity, on-board storage bin that is hydraulically controlled for quick, easy unloading or an over-the-row conveyor, you can customize your Oxbo 9200 to your field and your operation.

**Customized:** The three-wheel design allows for a tight turning radius. Operator is positioned above the picking unit for excellent visibility and with controls within easy reach.

**Easy Operation:** High structural integrity with minimum weight, low center of gravity for stability, and low ground compaction.

**Cleaning System:** An air-pressure separator, located in a clean environment, lifts the cherries while thoroughly removing debris.

**Powertrain:** The Oxbo 9200 features a reliable John Deere engine. The engine is located low to the ground for increased harvester stability as well as for easy servicing and maintenance.

### Available Options

- Over-the-row conveyor
- Side dump bin
- Dynarotor™ picking system
- Dynarotor™ Plus picking system
- Automatic steering
